Preface

This is the final report of EduBlock

Chapter 1

Acknowledgement

Chapter 2

Definition and Acronyms

Chapter 3

Project Introduction

3.1 Overview

3.1.1 Project Information

3.1.2 Project Team

3.2 Background

3.3 Existing Systems

3.4 Business Opportunity

3.5 Software Product Vision

3.6 Project Scope & Limitations

Chapter 4

Project Management Plan

4.1 Overview

4.1.1 WBS & Estimation

4.1.2 Project Objectives

4.1.3 Project Risks

4.2 Management Approach

4.2.1 Project Process

4.2.2 Quality Management

4.2.3 Training Plan

Area	Participants	When, Duration	Waiver Criteria
Blockchain	Project Team	20/07/2022, 2 weeks	Mandatory
Hyperledger Fabric	Project Team	01/10/2022, 2 weeks	Mandatory for Backend Team
Java, Javalin	Project Team	01/09/2022, 1 weeks	Mandatory

4.3 Master Schedule

4.4 Project Organization

4.5 Project Communication

4.5.1 Communication Plan

Item	Target	Purpose	When	Type
Discord	Project Team	Review meeting & Status report	Monday, Friday	Voice, Remote
Google Meeting	Project Team & Supervisor	Review meeting, Sprint revision & Closeup	Wednesday	Voice, Remote
Messenger	Project Team & Supervisor	Meeting planning, Q&A & Status report	Everyday	Text, Remote
FU Library	Project Team	Pair programming & Code review	Planned	Offline

4.5.2 External Interfaces

4.6 Configuration Management

4.6.1 Tools & Infrastructures

4.6.1.1 Common

Type	Tool
Version Control	Git, GitHub
UML	PlantUML, Graphviz
Deployment	Docker
Project Management	Quarto, GitHub Projects

4.6.2 Backend

Type	Tool
Programming Language	Java
Library	Javalin, Fabric SDKs, HSCore, Guava, Genson, EvalEx, JWT
Compiler	JDK, Lombok
UI	TinyLog, JLine, Fabric CLI
DBMS	H2, Hibernate, Minifabric
IDE / Editor	IntelliJ IDEA, VSCode

4.6.3 Frontend

Type	Tool
Programming Language	TypeScript
Library	React
Compiler	Node
UI	React
IDE / Editor	VSCode

4.6.4 Document Management

We use Quarto to build documents from Markdown files and use GitHub to manage the files and their changes. A participant will create a new branch to edit the files, create pull requests and wait for the project manager to review the changes and merge to the main branch. Then, it'll be built in three outputs: a website using GitHub Pages for visualization, A PDF document & A MS-Word document.

4.6.5 Source Code Management

We manage the source code by using GitHub. Endpoints of the project will be upload into separated repositories. Once the code is changed, the participant will create a new branch, create a relevant pull request, and wait for code owners to review and merge to the main branch.

Chapter 5

Software Requirement Specification

5.1 Overall Description

5.1.1 Product Overview

This is the software requirement specification for the project “EduBlock”. EduBlock is an web-application that will help the school to manage their student’s records, more specifically, the students and teachers can reduce paper’s work to manage their records. Lately, the school has been using paper to manage their student’s record, which is not efficient and not environmental friendly. EduBlock will help the school to manage their student’s records in a more efficient way, although there are some other 3rd party applications that can help school to keep their student’s records, but it is not really efficient and safe, our application use blockchain technology to make sure the data is safe and secure. Every step of the process that need to be work with the records will be tracked by EduBlock, so the school can easily track the data and make sure the data is not being tampered.

5.1.2 Business Rules

- The application will be used by the students, teachers, staff and admin.

5.2 User Requirements

- The Academic record management web-app has four active actors: Student, Teacher, Staff and Administrator.
- Students can view their academic record.
- Teachers can manage their class and view their students’ academic record.
- Staff can manage the classroom and view the academic record of the students, assign or delete teacher from the class, assign student to class, create new class.

5.3 Functional Requirements

5.3.1 System Functional Overview

The system is designed to provide a platform for students to view their academic records, teachers to view their students' academic records, staff to view the academic records of students, create new class.

5.3.2 Admin Features

5.3.2.1 UC-1 Admin Login

- **Description:** Admin can login with their username and password.
- **Actors:** Admin.
- **Preconditions:** Admin has an account.
- **Postconditions:** Admin can access the system.
- **Flow of Events:**
 - Admin go to EduBlock.
 - Admin enters their username and password.
 - System verifies the username and password.
 - System displays the dashboard.
- **Exceptions:**
 - If the username or password is incorrect, the system will display an error message.

5.3.2.2 UC-2 Admin view list of accounts

- **Description:** Admin can view list of all accounts.
- **Actors:** Admin
- **Preconditions:** Admin is logged in.
- **Postconditions:** System show list of all accounts.
- **Flow of Events:**
 - Admin go to EduBlock.
 - Admin login with username and password.
 - Admin click on “Account”.
 - System show list of all accounts.
- **Alternate Flow:**
 - System displays notification “No account found” if there is no account.
- **Exception:**
 - System displays notification “No account found” if there is no account.

5.3.2.3 UC-3 Admin view account details

- **Description:** Admin can view account details.
- **Actors:** Admin
- **Preconditions:** Admin is logged in.
- **Postconditions:** System show account details.
- **Flow of Events:**
 - Admin go to EduBlock.

- Admin login with username and password.
- Admin click on “Account”.
- Admin click on “Details” (human icon) on actions column.
- System show account details.
- **Alternate Flow:**
 - System displays notification “No account found” if there is no account.
- **Exception:**
 - System displays notification “No account found” if there is no account.

5.3.2.4 UC-4 Admin create (multiple) account

- **Description:** Admin can create (multiple) account for each role such as staff, student, teacher.
- **Actors:** Admin
- **Preconditions:** Admin is logged in.
- **Postconditions:** System create (multiple) account.
- **Flow of Events:**
 - Admin go to EduBlock.
 - Admin login with username and password.
 - Admin click on “Account”.
 - Admin click on “Create” button.
 - Admin fill in the form.
 - Admin can click “Add Account” button to add more account.
 - Admin click on “Create” button.
 - System create account(s).
- **Alternate Flow:**
 - System displays notification if the form is not filled correctly.
- **Exception:**
 - System displays notification if the form is not filled correctly.

5.3.2.5 UC-5 Admin search account

- **Description:** Admin can search account by text, username, email, id, first name and last name.
- **Actors:** Admin
- **Preconditions:** Admin is logged in.
- **Postconditions:** System show list of accounts that match the search criteria.
- **Flow of Events:**
 - Admin go to EduBlock.
 - Admin login with username and password.
 - Admin click on “Account”.
 - Admin click on “Search” button.
 - Admin input text to search account.
 - Admin add search criteria.
 - System show list of accounts that match the search criteria.
- **Alternate Flow:**
 - System displays notification “No account found” if there is no account

that match the search criteria.

- **Exception:**
 - System displays notification “No account found” if there is no account that match the search criteria.

5.3.3 Staff Features

5.3.3.1 UC-6 Staff Login

- **Description:** Staff can login with their username and password.
- **Actors:** Staff.
- **Preconditions:** Staff has an account.
- **Postconditions:** Staff can access the system.
- **Flow of Events:**
 - Staff go to EduBlock.
 - Staff enters their username and password.
 - System verifies the username and password.
 - System redirect Staff to dashboard.
- **Exceptions:**
 - If the username or password is incorrect, the system will display an error message.

5.3.3.2 UC-7 Staff view list of accounts

- **Description:** Staff can view list of all accounts.
- **Actors:** Staff
- **Preconditions:** Staff is logged in.
- **Postconditions:** System show list of all accounts.
- **Flow of Events:**
 - Staff go to EduBlock.
 - Staff login with username and password.
 - Staff click on “Account”.
 - System show list of all accounts.
- **Alternate Flow:**
 - System displays notification “No account found” if there is no account.
- **Exception:**
 - System displays notification “No account found” if there is no account.

5.3.3.3 UC-8 Staff view account list by role

- **Description:** Staff can view list of accounts by role.
- **Actors:** Staff
- **Preconditions:** Staff is logged in.
- **Postconditions:** System show list of accounts by role.
- **Flow of Events:**
 - Staff go to EduBlock.
 - Staff login with username and password.
 - Staff click on “Account”.
 - Staff click on role’s name to view list of accounts by role.

- System show list of accounts by role.
- **Alternate Flow:**
 - System displays notification “No account found” if there is no account.
- **Exception:**
 - System displays notification “No account found” if there is no account.

5.3.3.4 UC-9 Staff view account details

- **Description:** Staff can view account details.
- **Actors:** Staff
- **Preconditions:** Staff is logged in.
- **Postconditions:** System show account details.
- **Flow of Events:**
 - Staff go to EduBlock.
 - Staff login with username and password.
 - Staff click on “Account”.
 - Staff click on “Details” (human icon) on actions column.
 - System show account details.
- **Alternate Flow:**
 - System displays notification “No account found” if there is no account.
- **Exception:**
 - System displays notification “No account found” if there is no account.

5.3.3.5 UC-10 Staff search account

- **Description:** Staff can search account by text, username, email, id, first name and last name.
- **Actors:** Staff
- **Preconditions:** Staff is logged in.
- **Postconditions:** System show list of accounts that match the search criteria.
- **Flow of Events:**
 - Staff go to EduBlock.
 - Staff login with username and password.
 - Staff click on “Account”.
 - Staff click on “Search” button.
 - Staff input text to search account.
 - Staff add search criteria.
 - System show list of accounts that match the search criteria.
- **Alternate Flow:**
 - System displays notification “No account found” if there is no account that match the search criteria.
- **Exception:**
 - System displays notification “No account found” if there is no account that match the search criteria.

5.3.3.6 UC-11 Staff view class list

- **Description:** Staff can view list of all classes.
- **Actors:** Staff
- **Preconditions:** Staff is logged in.
- **Postconditions:** System show list of all classes.
- **Flow of Events:**
 - Staff go to EduBlock.
 - Staff login with username and password.
 - Staff click on “Classroom”.
 - System show list of all classes.
- **Alternate Flow:**
 - System displays notification “No class found” if there is no class.
- **Exception:**
 - System displays notification “No class found” if there is no class.

5.3.4 Teacher Features

5.3.5 Student Features

5.4 Non-Functional Requirements

5.4.1 External Interfaces

- Custom Fabric network

5.4.2 Quality Attributes

Our application ensures the following quality attributes:

- **Usability:** The application is easy to use and understand. The application is designed to be intuitive and easy to use. The application is designed to be used by both teachers and students.
- **Reliability:** The application is designed to be reliable. The application is designed to be used with blockchain technology to ensure data integrity.
- **Performance:** The application is designed to be fast and responsive.
- **Security:** The application is designed to be secure. The application is designed to be used with blockchain technology to ensure data integrity.
- **Maintainability:** The application is designed to be easy to maintain, update, and extend.
- **Portability:** The application is designed to be portable.
- **Scalability:** The application is designed to be scalable and can be extended to support more users and more features.
- **Interoperability:** The application is designed to be interoperable with other applications.
- **Reusability:** The application is designed to be reusable.
- **Testability:** The application is designed to be easy to test.

5.5 Other Requirements

Chapter 6

Software Design Description

6.1 Overall Description

6.1.1 Assumptions

6.1.2 Design Constraints

6.1.3 Technology Suggestion

6.2 System Architecture Design

6.2.1 Overall Architecture

Figure 6.1: Overall architecture

Component	Description
Chain Node (CN)	A node of the blockchain. This stores the records and handles the history and transaction requests from the Request Server (Change/View the score, information, etc.)

Component	Description
Request Server	The off-chain backend of a CN. This stores the pending requests from the user and is the only way to call a request to the CN. Each Request Server may have a different way to handle user requests (Voting, Direct Request, etc.)
Frontend Server	Provide the UX/UI for interacting with the Request Server

6.2.2 System Architecture

6.2.3 Package Diagram

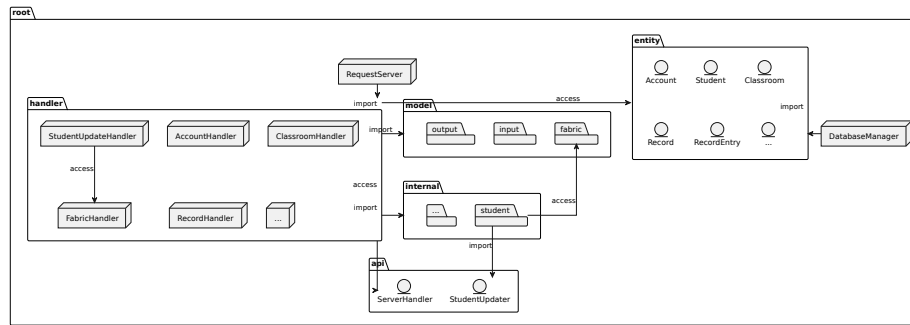

Figure 6.2: Package Diagram of Request Server

Package Name	Description
root	Main classes
api	The abstract classes & interfaces
entity	The entities of the database
handler	The handlers of the endpoints of the REST API server
internal	Internal classes used by other packages
internal/student	The instances of the Student Updater
model	The input / output objects
model/input	The input objects for the handlers
model/output	The output objects returned from the handlers
model/fabric	The models used internally by the student updater

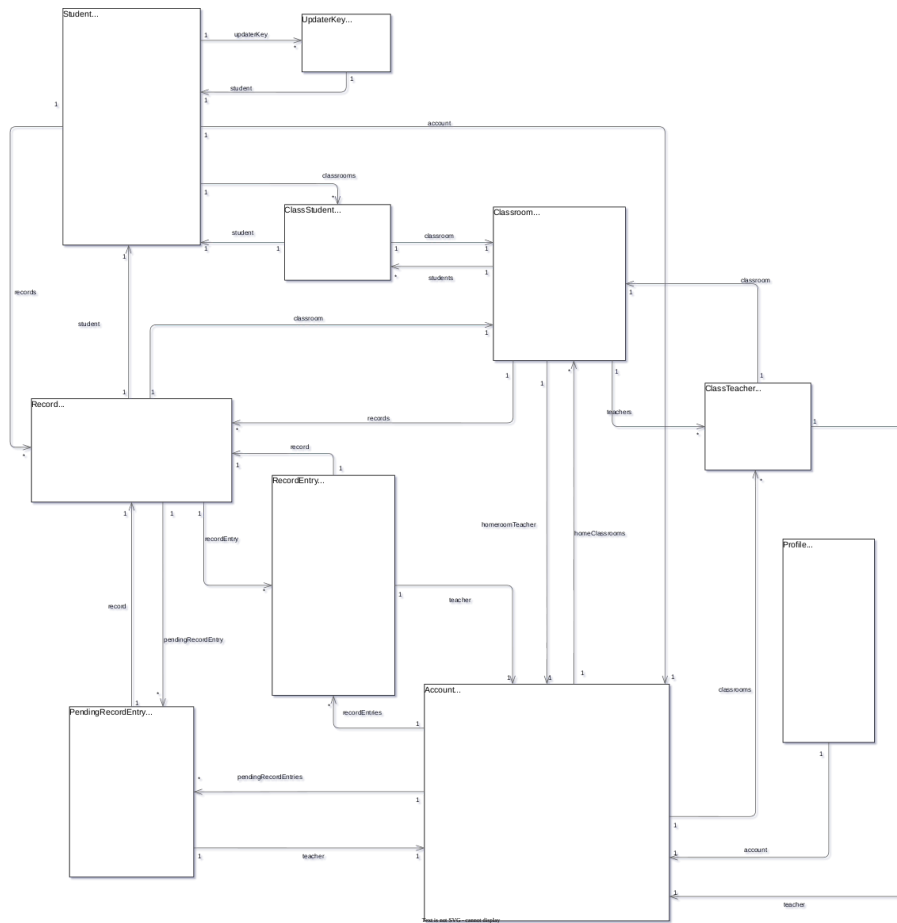

Figure 6.3: Class Diagram of the Request Server

6.3 System Detailed Design

6.3.1 Class Diagram

6.3.2 Sequence Diagram

6.4 Class Specification

6.5 Data & Database Design

6.5.1 Database Design

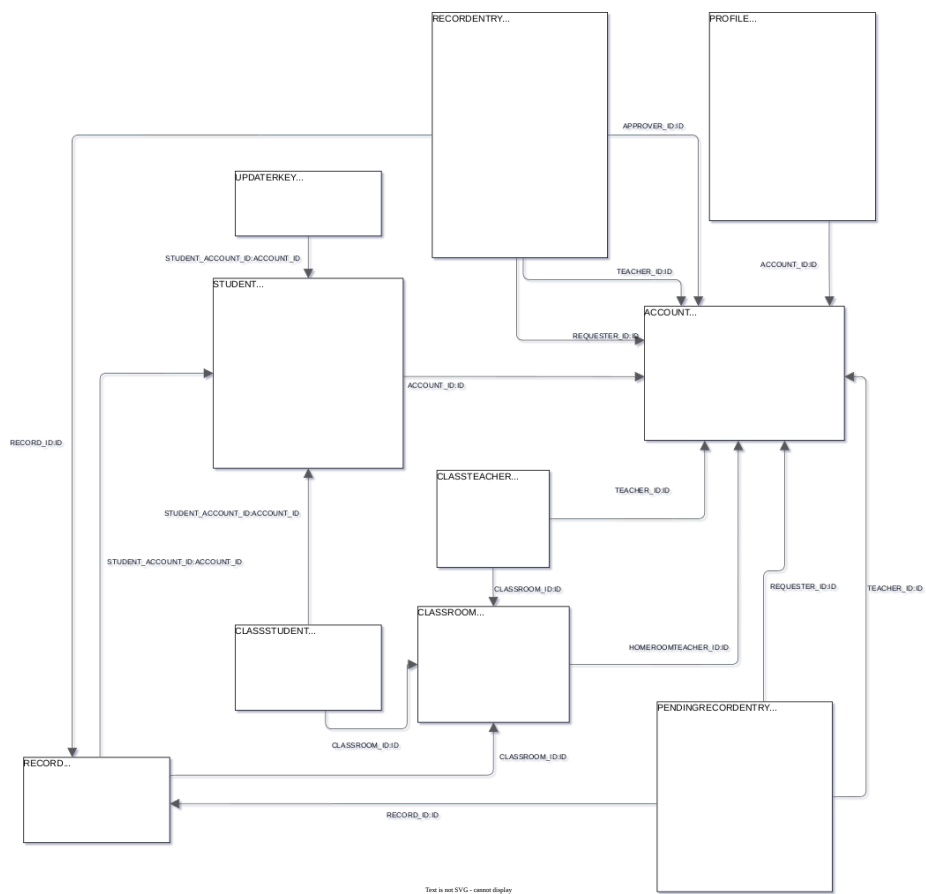

Figure 6.4: Database Design of the Request Server

6.5.1.1 Account

Field Name	Type	Size	Unique	Not Null	Flag	Notes
ID	bigint		x	x	PK	
USERNAME	character varying	255	x	x		

Field Name	Type	Size	Unique	Not Null	Flag	Notes
HASHEDPASSWORD	character varying	255		x		
SALT	character varying	255		x		
ROLE	character varying	255		x		
CREATEDAT	timestamp			x		

6.5.1.2 Profile

Field Name	Type	Size	Unique	Not Null	Flag	Notes
ACCOUNT_ID	bigint		x	x	PK, FK	
ADDRESS	character varying	255		x		
AVATAR	character varying	255		x		
BIRTHDATE	timestamp			x		
EMAIL	character varying	255		x		
FIRSTNAME	character varying	255		x		
LASTNAME	character varying	255		x		
MALE	boolean			x		
PHONE	character varying	255		x		
UPDATED	boolean			x		Used internally by student updater

6.5.1.3 Student

Field Name	Type	Size	Unique	Not Null	Flag	Notes
ACCOUNT_ID	bigint		x	x	PK, FK	
ETHNIC	character varying	255		x		
FATHERJOB	character varying	255		x		
FATHERNAME	character varying	255		x		
GUARDIANJOB	character varying	255		x		
GUARDIANNAME	character varying	255		x		
HOMETOWN	character varying	255		x		
MOTHERJOB	character varying	255		x		
MOTHERNAME	character varying	255		x		

6.5.1.4 Classroom

Field Name	Type	Size	Unique	Not Null	Flag	Notes
ID	bigint		x	x	PK	
NAME	character varying	255		x		
GRADE	character varying	255		x		
HOMEROOMTEACHER_ID	bigint			x	FK	
START_YEAR	integer			x		

6.5.1.5 Class Student

Field Name	Type	Size	Unique	Not Null	Flag	Notes
ID	bigint		x	x	PK	
CLASSROOM_ID	bigint			x	FK	
STUDENT_ID	bigint			x	FK	

6.5.1.6 Class Teacher

Field Name	Type	Size	Unique	Not Null	Flag	Notes
ID	bigint		x	x	PK	
CLASSROOM_ID	bigint			x	FK	
TEACHER_ID	bigint			x	FK	
SUBJECTID	bigint			x		Defined in the system's config

6.5.1.7 Record

Field Name	Type	Size	Unique	Not Null	Flag	Notes
ID	bigint		x	x	PK	
CLASSROOM_ID	bigint			x	FK	
STUDENT_ACCOUNT_ID	bigint			x	FK	

6.5.1.8 Record Entry

Field Name	Type	Size	Unique	Not Null	Flag	Notes
ID	bigint		x	x	PK	
RECORD_ID	bigint			x	FK	
REQUESTER_ID	bigint				FK	
TEACHER_ID	bigint				FK	
APPROVER_ID	bigint				FK	

Field Name	Type	Size	Unique	Not Null	Flag	Notes
APPROVALDATE	DATE			x		
REQUESTDATE	DATE			x		
FIRSTHALFScore	precision			x		
SECONDHALFScore	precision			x		
FINALScore	double precision			x		
SUBJECTID	bigint			x		Defined in the system's config
UPDATECOMPLATE	boolean			x		Used internally by student updater

6.5.1.9 Pending Record Entry

Field Name	Type	Size	Unique	Not Null	Flag	Notes
ID	bigint		x	x		PK
RECORD_ID	bigint			x		FK
REQUESTER_ID	bigint			x		FK
TEACHER_ID	bigint			x		FK
REQUESTDATE	DATE			x		
FIRSTHALFScore	precision			x		
SECONDHALFScore	precision			x		
FINALScore	double precision			x		
SUBJECTID	bigint			x		Defined in the system's config

6.5.2 Updater Key

Field Name	Type	Size	Unique	Not Null	Flag	Notes
ID	character varying	255	x	x		PK
STUDENT_ACCOUNTID	bigint			x		FK

6.5.3 Data File Design

File		
Name	Type	Notes
db	Folder	The folder of The H2 Database files
updater	Folder	Contains the data files of the local student updater

Chapter 7

Software Testing Documentation

7.1 Overall Description

7.1.1 Test Model

We apply the V-model in our project, which is a development of the waterfall model. Testing is carried out concurrently with the software development cycle in the V-model, where a testing phase corresponds to a phase of software development.

7.1.2 Testing Levels

About the Testing levels in our project, we apply all those levels including Unit testing, Integration testing, System testing and Acceptance testing.

With Unit testing, we test each small module in the system, each class and function. Eg (.....)

With Integration testing is a type of testing in which individual software modules or functions are logically integrated and tested in groups together. For instance, we can test the interoperability of two functions, add 1 item and search for the item to see if they interact well with each other, after successfully creating an item, we can proceed to search for the newly created item. or not.

System testing is the last test phase to determine whether the system is about to deliver satisfying the requirements and goals. It tests the whole functionality and interface of the system. For instance, a database test for a system test is used to see if the data displayed on the system matches the data in the database.

Finally, with Acceptance Test, similar to System Test but usually tested by customers, the purpose is to see if the software meets the customer's requirements or not.

7.1.3 Testing Types

Functional testing is checking if the system is working according to the business requirements and is performed in every level of testing. Non-Functional testing is similar to Functional testing in that both occur in all levels of testing. Non-functional testing is primarily concerned with the software's other features, such as its security and if data is exposed by straightforward queries in any input field. Structural testing is often considered a type of white box testing. Instead than focusing on the software's functionality, this method examines what is happening inside the program. Structural testing is also applicable at all testing levels. Changes Testing is done to determine whether or not the program is functioning correctly after bugs have been fixed.

7.2 Test Plan

7.2.1 Test Stages

Type of Test	Stage of Test			
	Unit	Integration	System	Acceptance
Function Test	X	X	X	X
User Interface Test				
Performance Test	X	X	X	X
Load, Stress, Volume test	X	X	X	X
Security test	X	X	X	X
Data integrity test	X	X	X	X

7.2.2 Resources

7.2.2.1 Human Resources

Worker/ Doer	Role	Specifice Responsibilities/Comments
TienHQ		
TuLX		
KhoaND		
UyCHA		
KhoiNM		

7.2.2.2 Environment

Purpose	Tool	Provider	Version
---------	------	----------	---------

7.2.3 Test Milestones

Milestone	Task	Efford (md)	Start Date	End Date
-----------	------	-------------	------------	----------

7.2.4 Deliverables

7.3 Test Cases

7.4 Test Reports

Chapter 8

Release Package & User Guides

8.1 Deliverable Package

8.1.1 Source Codes & Documents

No.	Items	Sub-Items	Type	Version
Code package				
1	EduBlock	EduBlock Client	New	1.0
2	Blockchain Network	Blockchain Chaincode	New	1.0
3	OCR	Record Table Processor	New	1.0
Database				
1	Tables	accounts.sql	New	1.0
		classrooms.sql	New	1.0
		subjects.sql	New	1.0
Documents				
1	Requirement	SRS_v1.0.docx	New	1.0
2	Deployment	UserGuide_v1.0.docx	New	1.0

8.1.2 Known Issues, Limitations & Restrictions

8.2 Installation Guides

8.2.1 System Requirements

OS: any

CPU: at least 4 cores

RAM: at least 4Gb

NETWORK: required

SOFTWARE: Docker

8.2.2 Setup Files

- Dockerfile.backend
- Dockerfile.frontend
- Dockerfile.ocr

8.2.3 Installation Instruction

8.3 User Manual

8.3.1 Terms & Definitions

No.	Term	Definition
01	F.FT	Feature
02	R.ADM	Admin
03	R.STF	Staff
04	R.TCH	Teacher
05	R.STD	Student
06	R.ANY	Any role

8.3.2 System Requirements

OS: any

CPU: any

RAM: at least 1Gb

NETWORK: required

8.3.3 Application Usage

8.3.3.1 Overview

No.	Feature	Role	Note
01	Create new account	R.ADM	Each role have different behavior
02	View account list	R.ADM, R.STF	
03	View profile	R.ANY	
04	Update profile	R.ADM, R.STF	Each role have different behavior
05	Update password	R.ANY	Each role have different behavior
06	Create new classroom	R.STF	Each role have different behavior
07	View classroom list	R.STF, R.TCH, R.STD	

No.	Feature	Role	Note
08	View classroom information	R.STF, R.TCH, R.STD	
09	View students of classroom	R.STF, R.TCH, R.STD	
10	View teachers of classroom	R.STF, R.TCH, R.STD	
11	Update classroom information	R.STF	
12	Update student in classroom	R.STF	
13	Update teacher in classroom	R.STF	
14	View update request list	R.TCH	
15	Verify update request	R.TCH	
16	Request update record	R.TCH, R.STD	

8.3.3.2 Feature 01: Create new account

Description:

- Admin create account for other user usage

Details:

- R.ADM
 - Step 1: Click Account on the left navigation bar to navigate to account list page
 - Step 2: Click Create at the top left of the page to open a modal with form
 - Step 3: Input user First name, Last name and select a role for user
 - Step 4: (Optional) Click Add at the bottom left of the form to add more account and repeat from Step 1
 - Step 5: Click Create at the bottom right of the form to confirm the account creation

8.3.3.3 Feature 02: View account list

Description:

- Admin, Staff view the account list to manage account information and find reference for other operations

Details:

- R.ADM
 - Step 1: Click Account on the left navigation bar to navigate to account list page
 - Step 2: (Optional) Click Search to reveal filter options below
 - Step 2.1: Select search field on the left
 - Step 2.2: Input search text on the right

- Step 2.3: Click Search button at the right most to apply list filter
- Step 3: View list of account
- Step 4: (Optional) Click page number at the top right to view other accounts

8.3.3.4 Feature 03: View profile

Description:

- Admin, Staff view user profile
- User view personal profile

Details:

- R.ANY (Personal)
 - Step 1: Click personal card at the bottom of the Vertical Navigation bar to navigate to the profile page
- R.ADM, R.STF
 - Step 1: Click Account on the left navigation bar to navigate to account list page
 - Step 2: Look for the specific account row in table
 - Step 3: Click Details in the **Actions** column to navigate to the profile page of that account

8.3.3.5 Feature 04: Update profile

Description:

- Admin, Staff update personal profile
- Staff update Teacher, Student profile

Details
